

Volcano plot showing differentially expressed genes between iPSCs and iNeurons. The x-axis represents $\log_2FC$ (iPSC / iNeurons) and the y-axis represents $-\log_{10}(padj)$. Red dots indicate downregulated genes, and blue dots indicate upregulated genes. A vertical dashed line at $x=0$ and a horizontal dashed line at $y=0$ indicate no change and significance threshold, respectively. Labeled genes include *TENM4*, *DOK6*, *MDGA1*, *APC2*, *APBA1*, *FZD1*, *SHANK1*, *SCUBE1*, *SRCIN1*, *EPHA3*, *CNR1*, *DACH1*, *PRSS23*, *GPR153*, *JUN*, *MMP2*, *DPYD*, *STING1*, *MMP1*, *SEMA3C*, *DCX*, *GPM6A*, *L1CAM*, *EBF3*, *SEZ6L*, *ASXL3*, *ELAVL4*, *NRN1*, *SNAP91*, *PRPH*, *UNC5C*, *CELF3*, *SCN3B*, *XKR4*, *OCLN*, *HSPA9*, *ABOE1*, *RORC*, *CYP2S1*, *CXCL5*, *GPR160*, *ZSCAN10*, *SCNN1A*, *TRDN*, *MARVELD3*, *COBL*, *GLB1L3*, *GSTO2*, *PRIM2*, *CDH3*, *GPR176*, *ANO9*, *CEBPZ*, *MTHFD2*, *FAM124A*, *QLDN6*, *MYO1E*, *SALL4*, *PHQ1*, *MAL2*, *TERF1*, *UGP2*, *SLC7A3*, *USP44*, *PLPP2*, *DNMT3B*, *EMSLR*, *APELA*, *LARGE2*, *C6orf132*, *SNHG4*, *EPCAM*, *CRYBG1*, *B3GNT7*, *MMP25*, *MIR302CHG*, *POU5F1*, *ESRC*, *LINC02972*, *CRIPTO*, *FOXH1*, and *JAKMIP2-AS1*.
